

THE ULTIMATE FIRE PROTECTION

SITEPROTECT

Construction sites are constantly evolving, and so are safety requirements. The SITEPROTECT system is completely adaptable and can be applied in many ways to respond to a variety of hazards and emergencies.

SITEPROTECT can link up to 480 individual devices in 15 different zones, including fire alarm call points, first aid alert points, smoke detectors, heat detectors, combined fire call point/first aid alert alarm and interface units.

SITENET

A 100% wireless, scalable, EN 54 certified, intelligent fire call point and detection alarm system with first aid alert functionality.

FIRST RESPONDER

Our Fire First Responder Station is a trolley based mobile unit that have been designed to act as a central station for fire safety.

As well as the standard configurations, these First Responder Stations are also fully customisable. You can build your own First Responder Station with customised signage, emergency plans, extinguishers, alarm type, cabinet type, company branding etc.

We stock and supply the full range of regulation-compliant fire extinguishers, with more than 50 different models listed on our website. This means we can keep your workplace safe, whatever your environment and risks.

The fire classification system (Class A-F) grades each type of fire according to the combustible materials involved. As a result, all of the fire extinguishers we provide have been specifically developed with different properties to combat each class of fire.
