

BULL®

Securing your safety

Maintain your fire door safety standards

The eight steps of the annual fire door inspection service for Bull Products current and new customers is summarised below. It includes an industry-standard 33-point check of door frames, locks and latches, and smoke and intumescent seals.

A Bull Product certified engineer carries out the fire door inspection alongside existing alarm and extinguisher testing - all in one convenient visit. And the service team will ensure you receive any follow-up calls and your annual reminder as part of the inspection plan.

STEP 1
Book your inspection via the Bull Products service team

STEP 2
A Bull Products engineer will carry out the inspection within 10 days (or sooner if the call is urgent)

STEP 3
The engineer will carry out the industry standard 33-point inspection of each fire door to ensure compliance

STEP 4
The engineer will provide a detailed report within 72 hours of the inspection

STEP 5
The report will include a quote for any necessary remedial works to ensure standards are met

STEP 6
The engineer will carry out any required remedial works

STEP 7
Certification will be provided to prove compliance

STEP 8
Bull Products will issue an annual reminder and book the appointment in good time to ensure a seamless service schedule
